

DON'T DELAY

do a bowel test today

If you are aged 50 to 74, ask your health worker or doctor about getting the free bowel screening test.

Bowel cancer can develop without any signs

- Bowel cancer is common among Aboriginal and Torres Strait Islander people.
- The good news is, there is a simple test that can help find it early.
- If found early, bowel cancer can be successfully treated in more than 90% of cases.

Stay healthy and strong for your family and do the free bowel test.
